

Title: My Internship Journey at CodeCraft Solutions

As part of my academic program, I interned at CodeCraft Solutions, where I joined their front-end team. My task was to develop user interfaces using React and style them with CSS and Bootstrap.

In the initial days, I learned about the agile workflow and took part in sprint planning meetings. Later, I contributed by building reusable UI components and testing them on different devices.

This internship gave me a real sense of how coding in a team differs from personal projects. I learned how to write production-level code and improved my ability to troubleshoot and adapt quickly.
