

Title: Internship Experience at CodeCraft Solutions

During my summer break, I had the opportunity to intern at CodeCraft Solutions, a mid-sized software development firm. I worked with the front-end development team, focusing mainly on UI design using HTML, CSS, and React.

In the first week, I underwent onboarding and training sessions on the company's tech stack and agile workflow. Later, I was assigned to a live project where I helped build responsive components for a web-based dashboard.

This experience taught me how to collaborate in a real-world team, meet deadlines, and write clean, reusable code. It also improved my problem-solving skills and gave me a clearer view of how software products are built from scratch.
