

## Title: Learning Through Internship at CodeCraft Solutions

I completed a four-week internship at CodeCraft Solutions, where I got the chance to explore the world of web development. My role involved working with the front-end team and learning technologies like React, HTML, and CSS.

The first week included orientation and learning about their development process. After that, I contributed to an internal tool by designing user interface elements that were mobile-friendly and efficient.

The internship helped me understand industry standards and how teams work together in software projects. I also improved my coding habits and time management skills.
