Title: My Software Internship at CodeCraft Solutions

I interned at CodeCraft Solutions for a month, where I worked on a real-time project related to UI development. My focus area was designing and implementing components using HTML, CSS, and React.

We followed the agile methodology, and I attended daily stand-up meetings with mentors and other interns. I helped optimize page layouts and fixed minor UI bugs during the final two weeks.

It was a rewarding experience that gave me hands-on exposure to how software companies function. I gained confidence in using version control (Git) and communicating with cross-functional teams.
